

ABSTRACT

A decorative sheet with good design properties and with superior moldability, without using a vinyl chloride resin, comprises a base material layer formed of a coloring resin material including an amorphous polyethylene terephthalate type resin as a main component; a print pattern layer formed on one surface of said base material layer and formed of a coloring ink comprising a binder including a copolymer of vinyl chloride and vinyl acetate as a main component; a transparent layer laminated on said print pattern layer and formed of a resin material including a transparent amorphous polyethylene terephthalate type resin as a main component; and a surface protective layer laminated on said transparent layer, which is made of a hard and transparent acryl type resin. The surface protective layer is constituted of a transfer protective layer of a transfer foil.
